COURSE NAME	Artificial Intelligence

AIM :

To write a Python program to solve the 8 Puzzle Problem using the BFS algorithm.

ALGORITHM :

1. Start with the initial puzzle state

2. Set the goal state.

3. Add the initial state to the queue.

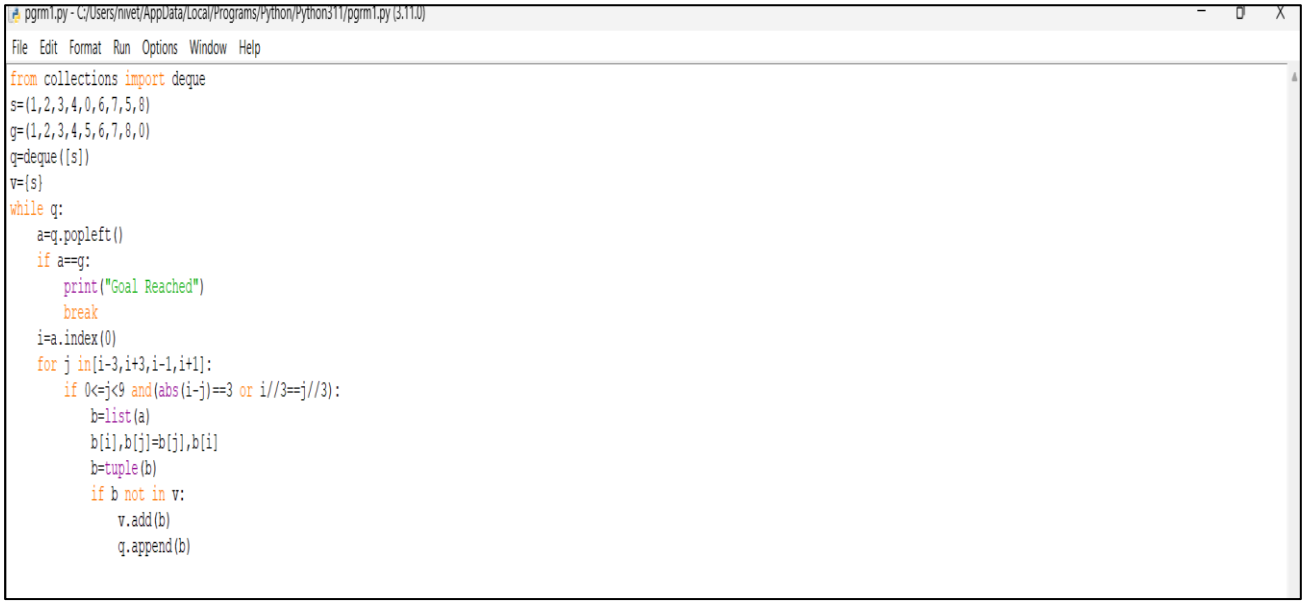

4. Select a state from the queue.

5. If the state matches the goal, print "Goal Reached".

6. Move the empty space in valid directions.

7. Add new states to the queue if they are not visited.

8. Repeat until the goal is reached.

OUTPUT :

RESULT :

Thus, the Python program to solve the 8 Puzzle Problem using the BFS algorithm was executed successfully, and the goal state was reached.
